@/Arpro “Management Documental (crm)”

@/Arpro designed for platforms:

Windows

Windows Server

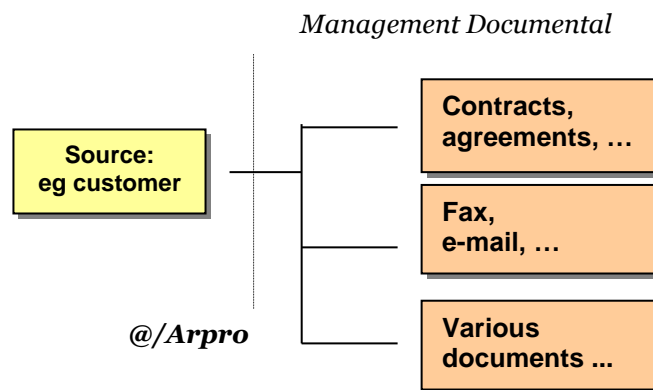

[Italian area]
With the contribution of:
Arpro – Venice
Arpro – Udine

Integrative tool of the solution @/Arpro to managing external documents and connect them to the system.

Whatever document created by a program recognized and included in the Microsoft Windows® platform, can be plugged into the business management program at one of these existing resources:

- ✓ *Customers, suppliers, carriers, ...*
- ✓ *warehouse items, BOMs*
- ✓ *orders and quotes*
- ✓ *accounting documents*
- ✓ *technical and production documentation*

These resources in the attached documents management can be shared between users on the corporate network, opened directly with a preconfigured function in the system: in this case @/Arpro solve the problem of the path and the type of program to use!

Basically, the program is a complete tool for the management of the businesses needs, also from a documentary point of view.

Multiple documents can be linked to the resources available in the system, and can be eventually grouped each other for a fast searching or for organizing needs.

A simplified and completed SOLUTION for businesses:

@/Arpro, ... Treasury, ... Analytical Accounting, ... Production, ... Job Orders, ...

Once set-up (you do it just one time), you can open documents directly from the **@/Arpro**. The instrument for document management can be consulted from the selected resource and has some new features:

@/Arpro designed for platforms:

[Italian area]
With the contribution of:
Arpro – Venice
Arpro – Udine

The “data compiling function” is a plus of great utility that allows automatic filling of fields in the attached document. It works only for Microsoft Word® documents, if they occur within “bookmarks” identified with the same name of the fields in the resources (as for example company name, address, zip code, town, province, telephone, etc.).

Just imagine a “company system” where there's a documental organization prepared in standard models, depending on use: may be associated to the resources and quickly self-compiled, avoiding unnecessary loss of time.

We are strengthening the entire system of the documents available on **@/Arpro**, where entering warehouse items or BOMs containing attached files, these last connect directly to destination documents.
