All “job orders” that you create are saved in the current year; with a tool you can also select previous years, only for informational purposes or for statistical or duplicate existing orders.

Are features that allow more opportunities to the solution, which together with the search conditions where you can specify different criteria to narrow down the list of job orders: by customer, by product type, dates, services or content articles, by state, etc.

Another important condition is the opportunity to transfer the job orders in the accounting area, through running the document into transport documents or bills of sale; a job order can have different states: not processed, processed, suspended, canceled.
