## @/Arpro Erp Module Job-Order

*“The management of the worksite”*

@/Arpro  
designed for  
platforms:

Windows

Microsoft  
Office

Windows  
Server

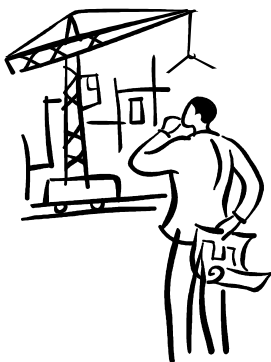

Microsoft  
SQL Server

[Italian area]

With the  
contribution of:  
Arpro – Venice  
Arpro – Udine

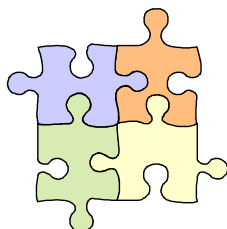

*The business solution oriented to management of construction activities, in particular for electricians, installers and plumbers, ...*

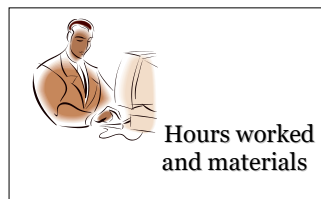

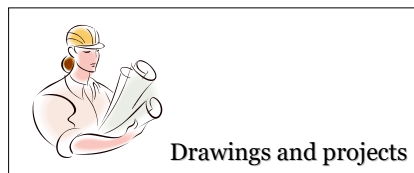

Insert materials and activities of the technical or commercial staff in a single document called “job order”, simplifies and organizes the management of the worksite.

You can create more job orders, for construction site and/or those who commissioned the work, there are tools available that allow facilitated engagement also with external elements: drawings or plans, specifications, estimates, pictures, ...

Each order thus emphasizes the reference data of the customer, delivered materials and activities performed (in terms of staff hours), estimate and consumptive values as well as the drawings and project data (as external documents linked).

Job Order

*A simplified and completed SOLUTION for businesses:*

There are simplified tools to manage all the activities, taking care of the work progress state with transformations in transport documents and invoices in the accounting area. At the end of the work, the whole state is stored in the worksite, are maintained updated payments with any advance payments received.

@/Arpro  
designed for  
platforms:

**Working relations**

The insertion of the activities carried out in the form of working hours for each department, through the reports of staff, is led by a very friendly prearranged system: you can divide your staff (employees) or external resources in different groups with divided costs. For each entry the program creates a corresponding data record in the job order, where it's automatically inserted the date of execution and costs.

**Analysis of differences between estimated and final**

It's available an evaluation for each individual work done or for the entire job order, where highlights the differences between the values originally estimated and the values that gradually are carried out by the staff. The analysis can also affect individual operators.

**Accounting area**

The processing of the job order in accounting produces the corresponding invoices and payments, download and disengages the inventory materials used during the entire working process.

**General Functions**

Various search functions can filter job orders for customer, delivery dates, start of construction or end of the work, for operator, ..., there're also many reports available. With the possibility of duplication of job orders also between different years, completes the picture of the general features.

The cost of application and ease of use are the key features highlighted by our customers, which make the suitable solution for many activities.

We remain at your disposal for any need, on this occasion we send our best regards.
