@/Arpro Erp “Work third account”

@/Arpro
designed for
platforms:

Windows

Windows
Server

Microsoft
SQL Server

[Italian area]

With the
contribution of:

Arpro – Venice
Arpro – Udine

The relationship with third-party suppliers of processing and management as contractors of operations on behalf of customers, nowadays plays particular importance in our contingent market.

Both needs are managed by @/Arpro solutions through special instruments designed; we analyze in detail and individually the two requirements.

a) Tertiary - processing and services suppliers

The management considers the tertiary as an integral part of its set of productive resources, thus leaving the maximum freedom in the organization of work cycles: in a single cycle then you can find stages of internal or external processing, even for multiple contractors simultaneously.

@/Arpro and @/Arpro Erp recognize for the “outside contractor” the need to prepare the necessary documents:

- ✓ orders to suppliers of raw materials (calculated with planning tool)
- ✓ orders to suppliers for the machining operations to be run
- ✓ documents into work account, for sending the material to be transformed
- ✓ documents for the return of materials (semi-finished or finished)

A simplified and completed SOLUTION for businesses:

@/Arpro, ... Treasury, ... Analytical Accounting, ... Production, ... Job Orders, ...

It will be possible to determine for each phase of work, the way will fill in the transport document, choosing from the list of materials sent or description of the semi-finished product; you can indicate the notes taken from the production cycle as additional information for the processing that must be executed.

The material sent in "processing account" is loaded into separate warehouse for the "outside contractor" (additional warehouse), to allow a simple and optimized inventory control.

The final balance of the external working phases takes place in a completely analogous way to the internal ones, with the possibility of returned partial, in different amounts from those agreed and with the indication of article indented (or semi-finished).

The generation of the supplier orders, be they for the raw material or for machining operations to be executed, will be automatically generated depending on the structure of the BOMs or the job order of reference.

Through a special progress function, processes are started for work orders whose materials are available (partially or completely in supplier orders), these processes can also complete the launch of production.

Upon receipt of the processed products, are checked for congruence of data with orders, load is moved in the main warehouse and unloaded simultaneously the warehouse of contractor.

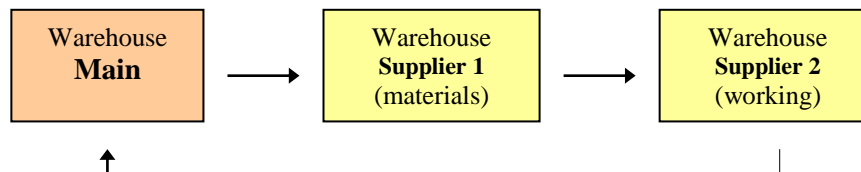

There's also the opportunity of generating documents for rendered goods to tertiary, relatively to products or processes that don't comply.

@/Arpro designed for platforms:

Arpro - Venice
Arpro - Udine

Example of a production chain of account third:

- ✓ *order for material to Supplier 1, with delivery to warehouse, Supplier 2 (in the order you select the warehouse of the Supplier 2)*
- ✓ *order of operations to Supplier 2 (as in the drawing, BOMs or job order)*
- ✓ *receipt of materials at the warehouse of the Supplier 2, 1st order is processed*
- ✓ *upon receipt of the semi-finished or finished products at the warehouse office, the 2nd order is processed and loaded the document load.*

At the closing of the work envisaged will be possible to start the execution of customer orders, after the loading operation from production (with evasion of the launch of production).

@/Arpro
designed for
platforms:

The completion of the phases will occur with the registration of purchase invoices of the supplier for materials and work performed, evading the documents suspended and then enlivening the accounting business (accounting, payment deadlines, tax records).

b) Tertiary on behalf of clients

In this case the needs are more limited and concentrated in the management of customer orders, on the possibility of processing partially or totally them.

It's available a tool very simple and fast, which allows the operator a complete visibility of orders still opened, limited to a single customer or from date to date of delivery, where you can select the articles (also more orders) that will be delivered to the customer.

This will create a document “rendered work” that automatically provides references originating in delivery of the goods (incoming documents), with all items selected. It will automatically download the parts warehouse and will close the corresponding customer orders.

We remain at your disposal for any need, on this occasion we send our best regards.
