

@/ARPRO TA ANALYTICAL ACCOUNTING

A SIMPLIFIED SOLUTION FOR THE ANALITICAL ACCOUNTING OF BUSINESSES,
WITH THE BASIC AREAS OF THE WHOLE ANALYTICAL PLATFORM!

@/Arpro TA - Analytical Accounting allows the control and monitoring of costs and revenues of companies, directing business decisions on the basis of such data.

Thanks to the simulation functions and dynamic update of data that make up the cost of the product and/or service, this software determines the value of a contract before starting work or accepting the customer's order.

Considering the manufacturing aspect, in the case in which during machining of a product has varied the cost by a factor of production already employed and defendant, the program recalculates the state of progress with the new market prices.
In this way it's possible to determine the real cost of a finished product or service and compare it with the estimated cost.

Detecting the variation of the factors of production is the responsibility of analytical accounting (these factors are ignored by the general accounting), which must be able to provide information of the estimate and effective costs, with notification of deviations arising.

Arpro TA - Analytical Accounting also addresses the problems related to the acquisition of the various services necessary for the "corporate life" such as telephone, water, cleaning rooms, electricity, etc. These stats are provided with an archive of the so-called "Contracts" where you can enter the information for each service required to divide the cost center and period of competence.

With the ability to extract the analytic balance and the budget analytic balance it completes the framework of functionality.

Our products:

@/Arpro

business management software for the accounting area, ...

@/Arpro TA - Treasury

management and optimization of the company finance
