operating systems

Designed for

With the contribution of:

Arpro Venice (Italy)
Arpro Udine (Italy)

@/ARPRO ERP JOB ORDER

FOR MANUFACTURING COMPANIES, ... FOR THE MANAGEMENT
OF CONSTRUCTION SITES, ... FOR SERVICE COMPANIES

SOME FEATURES:

Quotes.

This initial phase defines drafting of a budget with general information, details of alleged activities of the technical staff (consulting, design, etc.), the main values and revenues, and alleged costs and margins.

Management of the Customer Job Order.

Created manually or generated by a quote, it contains all necessary information: customer references, terms of delivery and payments, delivery dates, as well as a series of free and customizable fields by the user.

The data of the body can be divided into categories: consulting, design, workmanship, materials and free descriptions.

The document management program (CRM) allows you to correlate the job order with various external documents: specifications, bills of quantities, technical documents and data, pictures, surveys, e-mail, fax, contracts, etc.

Recognition of costs.

Occurs through the classical methodology of recording worksheets and/or time entries from the technical and administrative staff. A dedicated function simplifies the use of this information by department and operator.

Analysis of the differences between quote and final balance.

Analysis tools show the differences between the values originally estimated and scheduled work in progress. The analysis can also be designated for individual operators, materials used, departments or work center, even hours worked by time period and/or job order.

The documentation can be changed without prior notice.
