@/Arpro Erp® Job-Orders + CRM

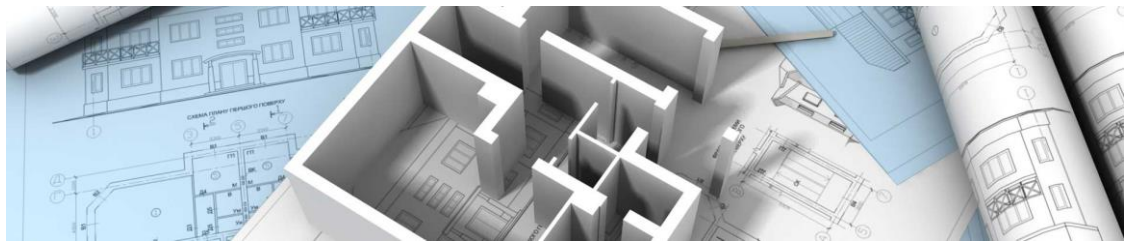

“Surveyors, Architects and Engineers”

@/Arpro®
designed for
platforms:

Florida Region

An enterprise *solution* aimed at professional offices of surveyors, architects and engineers for building sites, design departments and technical offices, for project management commissioned by customers.

For task management and Job Order progress, streamlining and simplifying paper flows from the external site to the office is essential to avoid errors and unnecessary waste of time in reloading data collected externally.

At the same time, it is also possible to record the presence of the various operators and the combination of hours and activities carried out on that specific contract or project (Job Order).

[Italian area]

All of your data at your fingertips!

With the
contribution of:
Arpro – Venice
Arpro – Udine

There is a continuous and constant monitoring of costs and activities of each individual Job Order and the data necessary for preparation of the various WPS (work progress statuses) and billing for the closing of tasks.

Having the pulse of the situation in a single data form (also on a daily basis), you have the overall control of the contract on the cost/revenue ratio with a constant view of the quality standards of the services performed.

Time, quality and costs are the three fundamental competition factors which are essential to operate in a highly aggressive and communicative global market.

A simplified and completed SOLUTION for businesses:

In small and medium-sized companies, there are many technical office activities, ranging from the inspection phases, design, drafting of metric calculations, to ensure supplies and materials needed to meet the deadlines and conditions of customer orders.

***@/Arpro Erp[®] Job Orders** module optimizes the management and organization of all these processes, offering you a facilitated platform to work with.*

@/Arpro[®]
designed for
platforms:

The program provides accounting integration, transforms quotes and Production documents (Job Orders) into sales invoices in the base program **@/Arpro**. *Auto-creating payment deadlines, accounting records while managing a real or virtual warehouse in real-time, is key for Surveyors, Architects and Engineers!*

Job Orders Management

Created as a new document or generated by an existing quote, it contains all of the necessary information: customer references, terms of delivery and payment, starts and delivery dates, etc. There are forms where you can enter data with customizable fields for your individual needs.

The data of the body can be divided into three categories: consulting or design (tasks), materials (warehouse items), as well as free descriptions or notes. Articles include raw materials, semi-finished or finished (BOMs).

All data accessible in just one document!

Analysis of Quotes/Final Balance

Evaluate individual activities or the whole Job Order easily. Highlighted are the variations between the values initially estimated and the values gradually scheduled with the project.

Know whether your business is making money!

Accounting

Sales invoices and payment deadlines of the Job Order, either partially processed (Work Progress Status) or total, generates corresponding accounting records in real-time. Several reports can be viewed, printed and exported in various formats.

@/Arpro®
designed for
platforms:

[Italian area]
With the
contribution of:
Arpro – Venice
Arpro – Udine

There are many search filters to extract data for Job Orders: by customer, start or delivery date, operators, warehouse items, as well as several other reference options.

Customizable print module by the user, through a graphical and interactive tool.

Documents Management (CRM)

Easily connect external documents in different formats (Excel®, Adobe®, Autodesk AutoCAD®, etc.), to the specific Job Order to manage content in one place.

These external documents can be specifications, metric and imperial computations, technical data, photos, drawings and so on.

These resources can be shared between users on the corporate network, which are opened directly. The program solves the problem of the path used and the type of program to use!

We remain at your disposal for any questions. With this opportunity we send you our best regards.
