Planning generates EVEN in the face of "simulated" customer orders!
The following questions **WILL** be answered:

- ✓ *Is the availability of articles sufficient or is it necessary to create supplier or production orders (in the case of semi-finished or finished products)?*
- ✓ *What are the production times required to process a possible customer order, compared to that resulting in the load contingent of business departments?*

@/Arpro®
designed for
platforms:

Why guess? Know ...

Advanced reports, Quotes & Consumptive values, Gantt® charts

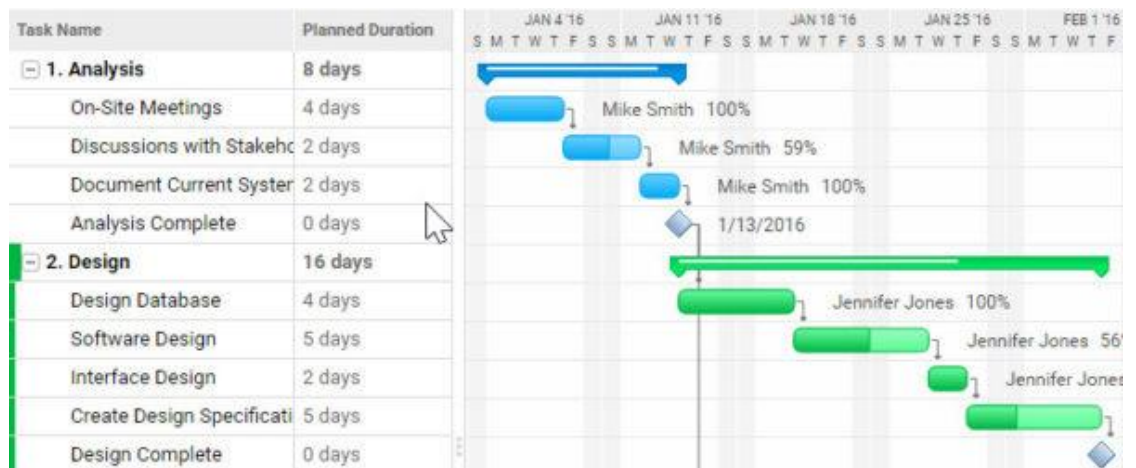

Through various detailed reports & 1-click Business Intelligence, analyze the status of production advancement up to the final phases, with the understanding of costs upon completion. These costs can then be compared to the values shown on the quote, allowing for an evaluation of the results.

Designed to retrieve, analyze, transform and report data to have a clear and immediate evaluation in real-time, for business intelligence & Gantt® diagrams.

Microsoft Project® and @/Arpro Erp® have an integral connection that extracts projections and production situations into customizable Gantt® charts.
