With special functions auto-connected to the general accounting like processing and extraction of graphical data, you can fully satisfy these requirements:

- ✓ Analysis of the present and future financial needs, and the financial impact caused by business decisions
- ✓ Optimization of cash flows for the proper management of balancing.
- ✓ **Forecast, in time** of risk & develop a game-plan in advance
- ✓ Analysis of the most cost-effective strategies of funding sources & delegation of the most appropriate debt according to business and profitability

There are many questions that arise every day for the entrepreneur or CEO:

- ✓ what are the real financial needs?
- ✓ how do I payback bank loans?
- ✓ how do I analyze direct limits to avoid excessive dependence on third-parties & indirect costs from borrowing & stop progressive increase in financial charges?

Of course, all legitimate questions which are difficult to answer precisely!

@/Arpro TA® makes it easy, fast and organized!

The entire management uses auto-mechanisms for considerable time savings:

- a) the treasury flows are auto-created by the general ledger
- b) importing "forecast flows" such as the scheduled payments, pending orders, etc.., complete the management of financials

The imported data will generate budget movements or so-called "forecasts", considering these data aren't final and confirmed yet.

The answers on how to manage the company finances are ready without any further manipulation, just print the available reports & business intelligence.

The solution offers many possibilities for analysis in real-time, with comparative figures between actual values and any final quotes.

Analysis Final Balances/Budget

The analysis of final balances or budget is an operating environment that processes real-time financial data.

It extracts these values per period and groups them by treasury causal, for each causal the value of actual and budget (if any) is then represented by month.
