

@/ARPRO ERP® PRODUCTION

A SIMPLIFIED AND VERSATILE SOLUTION FOR PRODUCTION COMPANIES,
FULLY EQUIPPED FOR THE WHOLE PRODUCTION PLATFORM!

@/Arpro Erp® Production is a highly scalable manufacturing solution.

This software is business oriented for companies with purchase organization needs, calculation of production needs and all aspects required for controlled manufacturing.

Effectively stands out for being a complete solution while being very flexible and easily integrated into various business situations.

Compatible with Microsoft Windows®, it takes advantage of the network operating systems and supports available devices (printers, VoIP phone, etc.).

@/Arpro Erp® Production works in real-time on the state of customer and supplier orders, on the warehouse status of raw materials, semi-finished and finished products, extracting information after completing the scheduled processes then transfers the production data to the system management.

This module handles both standard production through BOMs and with flexible production through job-orders documents, it can share both technologies simultaneously, while taking into account detection times.

Every situation could change during the process and maybe even starting from a BOM reference in order to develop a custom product. All manufacturing processes are optimized by using *@/Arpro Erp® Production*®!

For all Microsoft Windows®
operating systems

Designed for

With the contribution of:

N & R Venice (Italy)
N & R Udine (Italy)

@/ARPRO ERP® PRODUCTION

Through the years and listening to advice from companies with sustained production needs, we gained valuable experience that enabled us to conceive and develop a solution that responds to the most common challenges of production. Our development department was perfectly able to overcome all of the defined objectives.

@/Arpro Erp® Production also allows purchase planning for the production area on the basis of the customer orders from the existing backlogs. This element optimizes inventory management by minimizing situations of overages and insufficiencies of stock. The analysis considers the overview of customer orders, orders to suppliers as well as any suspended job orders or production launches.

Through production planning the program generates order suggestions for your suppliers including any internal or external tasks even for third-parties. This is a very important attribute for uncompromised, organized and efficient production.

Internal tasks combined with the "production calendar", trigger the production process time recording, acquiring costs to advance production.

Finally, the availability of Gantt® charts allows for a clear and immediate evaluation with graphical representations at multiple levels of the production status.

Features

- fi *planning supplier orders*
- fi *planning production orders (job orders, launches)*
- fi *managing minimum inventory*
- fi *job-orders and production launches management*
- fi *production detection times*
- fi *production quotes and final balance management*
- fi *BOMs*
- fi *picking lists of raw materials, semi-finished or finished products*
- fi *production documents*
- fi *statistics and analysis diagrams*
- fi *quality control (ANSI)*
- fi *easy customization tool for print modules*
- fi *import and export data tools*
- fi *managing users and passwords*
- fi *online manuals*
- fi *in accordance with Microsoft Office®, Adobe Acrobat®, etc.*

Our Products:

@/Arpro®

business management software for the accounting area, ...

@/Arpro TA® Treasury

management and optimization of company finances
