Microsoft SQL Server® 2017 Express Installation

SQL 2017 Express is available free from Microsoft®.

Microsoft SQL Server is an enterprise quality database management system that's usually hosted by a server and can scale across multiple servers and locations.

For local PC, small databases, and less critical situations, Microsoft® offers a limited version of SQL Server called SQL Server Express. SQL Server Express can be downloaded for free and installed on your local PC.

There are a number of limitations, notably: constrained to a single CPU, 1GB RAM, 10GB database size per database. If your organization needs more than these constraints, a full license will need to be purchased.

However, network is not enabled by default, so there is some configuration required for SQL Server 2017 Express to work correctly.

This article will guide you through the process of installing SQL Server 2017 Express® on a 64-bit Windows operating system, so that you can use it with deployment server or notification server.

Download Microsoft SQL Server 2017 Express®

First, you will need to download SQL Server 2017 Express from the website suggested on our @/Arpro Standalone platform webpage.

Install Microsoft SQL Server 2017 Express®

When you are ready to install SQL 2017 Express, select the link on our webpage (“Download and install Microsoft SQL Server 2017 Express”, on Topic 2), then the “Download” button on the opened Microsoft webpage.

The installation procedure requires you to run or save the installation kit on your local computer. Select the latter option, once saved you will have to run (double-click on the local file) to proceed with the installation.

8. The SQL Server 2017 Setup will now appear on the “Server Configuration” page, then click Next.

The screenshot shows the 'Server Configuration' step of the SQL Server 2017 installation. The window title is 'SQL Server 2017 Setup'. The main heading is 'Server Configuration' with the instruction 'Specify the service accounts and collation configuration.' On the left is a navigation pane with options like 'License Terms', 'Global Rules', 'Microsoft Update', 'Product Updates', 'Install Setup Files', 'Install Rules', 'Feature Selection', 'Feature Rules', 'Instance Configuration', 'Server Configuration', 'Database Engine Configuration', 'Consent to install Microsoft R ...', 'Consent to install Python', 'Feature Configuration Rules', 'Installation Progress', and 'Complete'. The 'Server Configuration' section is active. It contains two tabs: 'Service Accounts' (selected) and 'Collation'. Below the tabs, a message states: 'Microsoft recommends that you use a separate account for each SQL Server service.' A table lists the services and their configurations:

Service	Account Name	Password	Startup Type
SQL Server Database Engine	NT Service\MSSQLSARP...		Automatic
SQL Server Launchpad	NT Service\MSSQLLaun...		Automatic
SQL Full-text Filter Daemon Launc...	NT Service\MSSQLFDLa...		Manual
SQL Server Browser	NT AUTHORITY\LOCALS...		Disabled

Below the table, there is a checkbox labeled 'Grant Perform Volume Maintenance Task privilege to SQL Server Database Engine Service'. This checkbox is currently unchecked. A note explains: 'This privilege enables instant file initialization by avoiding zeroing of data pages. This may lead to information disclosure by allowing deleted content to be accessed.' A link 'Click here for details' is provided. At the bottom of the window are three buttons: '< Back', 'Next >', and 'Cancel'.
